## Active Forest Fires

**Media Inquiries:** This page provides up-to-date information on forest fires. For additional information not available on this page, please contact the Provincial Forest Fire Duty Officer from 8:00 a.m. to 11:00 p.m. daily at 709.632.1153.

### Forest Fire Activity Data

**There are currently no active forest fires in the province.**

Fires Recorded as of	Number of Fires	Area Size (ha)
August 13, 2018	96	515.3

#### Comments:

#### Definitions

#### Fire Status:

The Fire Status is an indication of the fire's current condition and is categorized as Out of Control (O/C), Contained (C), or Under Control (U/C)

- Out-of-Control (O/C): A wildfire not responding or only responding on a limited basis to suppression action such that the perimeter spread is not being contained.
- Contained (with percentage) (C): With currently committed resources, sufficient action has been taken to prevent fire spread beyond existing or predetermined boundaries on a percentage of the fire based on prevailing and forecasted conditions.
- Under Control (UC): A wildfire having received sufficient suppression action to ensure no further spread of the fire.

**Hot Spot:**

A small area of smouldering or glowing combustion, which may be exhibiting smoke, located on or within the wildfire perimeter; a term commonly used during the mop-up stage of a fire.

**Hectare (ha.):**

The hectare is the metric unit of area measurement and can be considered in the following ways:

- 1 hectare = 100 metres by 100 metres or 0.01 km<sup>2</sup>
- 1 hectare = 2.47 acres

**Estimated Size:** The size or area of a fire is usually just an estimate until after the fire is extinguished and can be properly measured. An accurate measurement is often difficult due to the smoke that can accompany a large active fire. A fire can end up being much bigger, or much smaller than originally estimated.
