Appendix A

Strategic Directions
Strategic directions are the articulation of desired physical, social or economic outcomes and normally require action by more than one government entity. These directions are generally communicated by government through platform documents, Throne and Budget Speeches, policy documents and other communiqués. The Transparency and Accountability Act requires departments and public bodies to take into account these strategic directions in the preparation of their performance-based plans. This action will facilitate the integration of planning practices across government and will ensure that all entities are moving forward on key commitments.

Title: Sustainable Resource Development

Outcome: Effective and efficient management of our natural resources to ensure that they are utilized in a sustainable manner such that the resources and the economic benefits from these resources are optimized. This outcome supports government direction as outlined in Government’s 2003 Policy Document and the 2004 and 2005 Speech from the Throne.
